

2020 Market Analysis of Dementia and Neurodegenerative diseases Conference

Jerzy Leszek

Professor, Department of Psychiatry, Wroclaw Medical University, Wroclaw, Poland, E-mail: jerzy.leszek@umed.wroc.pl

Warm Welcome to all as we affably invite you to be a part of the [16th World Congress on Vascular Dementia and Neurodegenerative diseases](#) on **May 18-19, 2020** which will be held in **Osaka, Japan**.

The congress will highlight the theme “**Share the vision on vascular dementia and neurodegenerative diseases**” to gather the researches, scientists, and from academicians from around the world and also to set a common platform for discussion and exploring recent advances in Vascular Dementia research.

The 2 days in May will be highly interactive when all the aspiring minds of the Neuroscience will come together. You will feel free to reach us and share your thoughts to continue your lifelong learning and build on the skills that make you successful.

[Vascular dementia](#), also known as multi-infarct dementia, is the second most common dementia type in older people. In any case, there are numerous different conditions that can cause side effects of dementia, including some that are reversible, for example, thyroid issues and nutrient inadequacies. It happens when part of the brain doesn't get enough blood carrying the oxygen and nutrients it needs. In vascular dementia, changes in intuition abilities at times happen all of a sudden after strokes that square significant cerebrum veins.

Thinking issues likewise may start as mellow changes that decline step by step because of various minor strokes or different conditions that influence littler veins, prompting aggregate harm. [Neurodegenerative disease](#) primarily affects the neurons in the human brain. Neurons are the building blocks of the nervous system which includes the brain and spinal cord. Neurons typically don't repeat or supplant themselves, so when they become harmed or pass on they can't be supplanted by the body. Neurodegenerative sicknesses are serious and crippling conditions that outcome in dynamic degeneration and/or demise of nerve cells. This causes issues with development (called ataxias), or mental working (called dementias). Dementias are liable for the best weight of neurodegenerative maladies, with Alzheimer's speaking to around 60-70% of dementia cases.

We are expecting around 50+ Speaker and 100+ delegate participants excluding the students for our Conference.

The gathering of international experts and investigators in Japan will lead the conference discussion to the extent of exploring the new happenings, investigating the case studies, and innovating the truth behind the Vascular Dementia and Neurodegenerative disorders.

Enrol now to be present the sessions on Dementia, Vascular Dementia, Neurodegenerative disorders, Dementia care management, Vascular Cognitive impairment, Lewy body dementia, Alzheimer's Diseases, Parkinson's Diseases, Huntington's Diseases, Dementia Nursing, Neuropharmacology, Neuroimmunology, Neurological issue.

Global Conference on Vascular Dementia and Neurodegenerative issue in 2020 will concentrate on Dementia, Vascular Dementia, Neurodegenerative scatters, Dementia care the executives, Vascular Cognitive impedance, Lewy body dementia, Alzheimer's Diseases, Parkinson's Diseases, Huntington's Diseases, Dementia Nursing, Neuropharmacology, Neuroimmunology, Neurological clutters through welcomed whole talks, symposia, workshops, welcomed sessions, oral and publication introductions of spontaneous commitments. The approaching International Conference on Vascular Dementia and Neurodegenerative Disorders need to draw your consideration for this regarded occasion which is planned on May 18-19, 2020 in Osaka, Japan. Go along with us to improve your insight in the field of Vascular Dementia and Neurodegenerative issue. We might want to invite you to go along with us and offer your insight just as your perspectives at Vascular Dementia Congress 2020 where you will make certain to have an important involvement in researchers around the globe.

Market Analysis

[16th World Congress on Vascular Dementia and Neurodegenerative Diseases](#) is a yearly meeting of Neuroscience organizations as well as Dementia committees to debate the future of the vascular dementia in terms of collaboration, structures and executive development. Brain investigators, public health specialists, scientists, academic experts, Industry intellectuals, scholars to exchange about state-of-the-art research and technologies. Intention of this conference is to inspire new ideas for treatment that will be favourable across the spectrum of [Vascular Dementia Congress 2020](#). Conferences, National symposiums and Workshops

provide a dedicated opportunity for the advancement, implementation and exchange of information about Vascular Dementia Congress 2020 and its associated areas.

Why to attend???

[16th World Congress on Vascular Dementia and Neurodegenerative Diseases](#) is a single forum to bring together worldwide eminent academics in the field of neuroscience and neurology, Brain investigators, public health experts, scientists, academic geniuses, industry researchers, scholars to exchange about state of the art research and skills.

Meet Your Target Market With members from around the world focused on learning about the latest innovations in screening and treatments for [Vascular Dementia and Neurodegenerative diseases](#); this is your single best chance to arrive at the biggest array of members from the Universities, Neurology examine focuses and clinics and direct shows of new screening instruments, disperse data about novel operators and strategies, meet with highly affiliated speakers, showing of clinical trials as well as advancements in new Dementia and neurodegenerative therapies, current methods and controversies in psychic therapy and receive name recognition at this 2-day event. World-renowned speakers, the most recent techniques for screening as well as for treatment, and the newest updates in Vascular Dementia and Neurodegenerative disorders and treatments are hallmarks of this conference.

According to WHO 47.5 million people have dementia and every year 7.7 million new cases are appearing. By 2030 total cases of dementia is projected to be 75.6 million and almost triple by 2050 to 135.5 million. Alzheimer’s disease contributes 60-70 % of cases in dementia and second most common condition of dementia is vascular dementia which contributes 20% of cases all over the world. Total estimated cost of dementia is 818 billion US \$ in 2015.

With members from around the world focused on learning about various Alzheimer’s disease and how to prevent the disorders. This is your best chance to arrive at the biggest collection of members from the whole world.

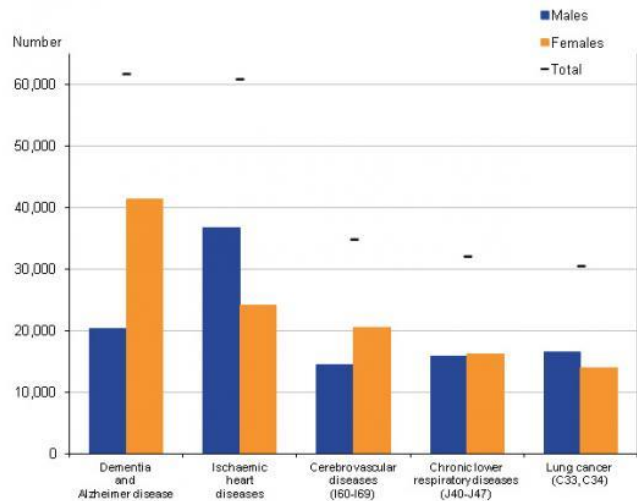

At the [Dementia conferences](#) and from the eminent people speech, you can update your knowledge about current situation of Dementia research and receive name recognition at this 3-day event. World-renowned speakers, the most recent techniques, tactics, and the newest updates in Dementia fields are hallmarks of this conference.

Intention of this conference is inspire new ideas for treatment that will be helpful across the spectrum of [Vascular Dementia Congress 2020](#).

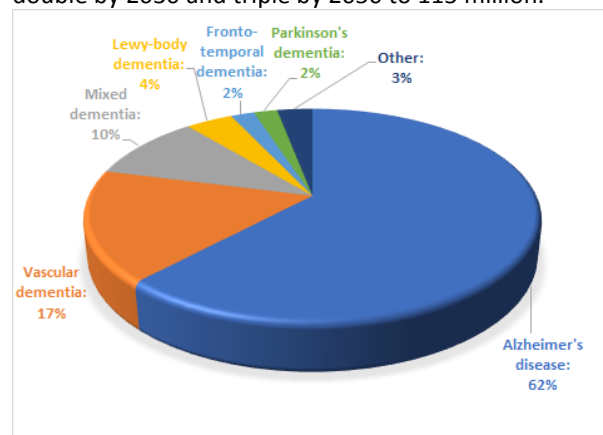

Importance and scope

From every corner of the world, someone develops dementia every 3 seconds. This was an estimated value at 46.8 million people worldwide living with dementia in 2015 and the number is expected to be close to 50 million

people in 2017. This number may double every 20 years, reaching 75 million in 2030 and 131.5 million in 2050. Mostly it is observed too be increased in developing countries. For now, 58% of people with dementia are living in low- and middle-income countries, may be, by 2050 this can rise to 68%.

Worldwide results of current meta-analysis reveal 44 million people (worldwide) suffered with vascular dementia during 2010 and expected to double every 20 years, to the number 65.7 million in 2030 and 115.4 million in 2050. In 2010, 58 per cent of all people with low or middle incomes were with dementia lived in countries. This proportion anticipated in increase to 63 per cent in 2030 and 71 per cent in 2050. The values are expected to double by 2030 and triple by 2050 to 115 million.

Glance at market of dementia:-

The all out assessed overall expense of dementia is US\$818 billion of every 2015, which speaks to 1.09% of worldwide GDP. By 2018, the worldwide expense of dementia will transcend a US\$ trillion. This figure includes costs attributed to informal care (unpaid care provided by family and others), direct costs of social care (provided by community care professionals, and in residential home

settings) and the direct costs of medical care (the costs of treating dementia and other conditions in primary and secondary care).

Direct restorative consideration costs represent generally 20% of worldwide dementia costs, while direct social part costs and casual care costs each record for generally 40%. The general commitment of casual consideration is most prominent in the African areas and least in North America, Western Europe and some South American districts, while the switch is valid. This implies if worldwide dementia care were a nation, it would be the eighteenth biggest economy on the planet. The annual costs exceed the market values of companies such as Apple (US \$742 billion) and Google (US \$368 billion). More information is available in our World Alzheimer Report 2015 suffer from [Alzheimer's disease](#).
